SUBJECT: SWEDISH POLICE SEIZE LARGE QUANTITY OF PIRATED  
FILE SHARING DATA

[1](#)1. Stockholm police have seized a computer server believed to contain the largest quantity of pirated material ever discovered in Sweden. The server was located in the Brandbergen neighborhood south of Stockholm and was part of a Nordic file sharing ring known as Sunnydale, according to the Swedish Anti-Piracy Agency, a private copyright advocacy group.

[1](#)2. The confiscated server contained data equivalent to 16,000 movies. The Sunnydale ring consists of 10 servers, together containing approximately 65 terabytes of pirated material ranging from movies and music to television series and computer games. Although the police have made no arrests and the suspects operating the server have not been identified, the server ring has collapsed as a result of the raid, according to Anti-Piracy Agency attorney Henrik Ponten.
